

Evan Mobley (Order #29860615)

CHAPTER 6

EQUIPMENT

A character's signature weapons and special equipment are usually Powers with the Item Con, but Heroes also use mundane objects like cars, computers, and cellphones. Any game that takes place in the modern world will necessarily be filled with humble but useful everyday items, and this will be doubly true in tech-heavy sci-fi settings. These everyday items are **gear**. This chapter includes an assortment of mundane gear for your games. It also provides rules for creating unique items called Gadgets, for creating and modifying vehicles, and for designing headquarters.

RESOURCES

Players don't have to worry about buying mundane gear. Heroes are assumed to have any mundane items they want as long as the GM thinks it's reasonable, taking Perks like Contacts, Patron, Resources, and Wealth into account. Even Heroes who are completely broke tend to have what they need for their heroics, although they sometimes have to walk home afterwards. That same philosophy also applies to all mundane items Heroes are assumed to own. For example, the average Hero probably owns a car and has a place to live, while a wealthy one might reasonably own several cars, plus a motorcycle or two and maybe a jet, not to mention a few homes scattered around the world. Unless a player goes way off the rails, none of this needs to be tracked. GMs should just use common sense when determining what kind of mundane items a Hero owns or can reasonably acquire when needed.

NPCs have whatever gear the GM wants them to have. Remember, however, that Minions don't use gear. When it comes to Minions, all that matters is their Threat. Although Minions often carry or have access to mundane equipment not reflected by their Threat — communicators, extra ammo, night vision goggles, and so on — these are just details for the GM.

GEAR LIMITS

All games have a **Gear Limit** that indicates the maximum Trait rank you can apply when using mundane equipment that boosts your Traits for a specific purpose (usually armor and weapons). The default Gear Limit in most games is 6d. That means the maximum effective rank you can have when using a piece of mundane gear is 6d plus whatever bonus it provides. For example, a pistol has a +2d Weapon Bonus; you roll Agility +2d when using a pistol to attack. In a game with a 6d Gear Limit, your maximum effective rank with a pistol is 8d. Even if your Agility is 7d or higher, you can't add more than 6d (the game's Gear Limit) to the pistol's Weapon Bonus. This makes mundane gear — especially armor and weapons — less useful for characters with superhuman Ability ranks.

Trait Caps and Gear Limits are not the same thing. A game's Trait Cap is the maximum rank you can have in any Trait. A game's Gear Limit is the maximum Trait rank you can apply when using a piece of mundane gear. For example, most Standard power level games have a 12d Trait Cap and a 6d Gear Limit. The 12d Trait Cap means you can have up to 12d Agility. The 6d Gear Limit means that even if you do, you can only apply up to 6d when using a piece of mundane gear. Despite your 12d Agility (Trait Cap), you roll only 8d when firing a +2d Weapon Bonus pistol (Gear Limit).

EXCEPTION: CLOSE COMBAT

The one exception to this rule involves melee weapons. If your unarmed attack or defense rank exceeds your effective rank while armed with a melee weapon, you can use your unarmed attack or defense rank instead. For example, assume you are playing a game with a standard 6d Gear Limit. If you have 12d Might and are wielding a battle axe with a +3d Weapon Bonus, you can use your 12d Might in place of the axe's 9d maximum effective rank when making attack rolls. In this case, the benefit of the axe is that it lets you inflict lethal damage rather than subdual damage. Of course, no mundane axe is going to withstand too many of those super-powered swings.

RAISING THE LIMIT

The default Gear Limit described above imitates superhero comics, where mundane gear is usually reserved for civilians and low-powered Heroes. But that isn't a universal rule. There are comics, notably grittier ones and those set in sci-fi or fantasy worlds, where obviously superhuman characters regularly use mundane equipment. Whether it's battle axes and brigandine or pistols and polycarbon, gear matters in certain settings. As mentioned in Chapter 4, GMs can raise the Gear Limit to 9d, 12d, or more to make mundane weapons and armor useful for characters with superhuman Ability ranks. GMs can even disregard Gear Limits completely if they want everyone to use gear.

Evan Mobley (Order: 29850615)

Note that mundane gear will overshadow Powers if the game's Trait Cap doesn't exceed its Gear Limit by at least 3 points. Consider a Low Level game with a 10d Trait Cap and a 9d Gear Limit. In that game, attack Powers like Blast and Strike are capped at 10d, but characters armed with mundane weapons can easily roll 11d or more to attack because many weapons have a Weapon Bonus of +2d or better. This might not be an issue in your game-world, but if it is, consider the following options.

The first way to balance Powers and gear under these circumstances is to give characters a +3d bonus when using Powers to inflict or resist physical damage (this doesn't apply to mental/psychic damage unless the game setting includes mundane arms and armor that inflict and repel such damage). A second option is to let Heroes purchase Powers up to 3 ranks above the game's Trait Cap with the understanding that these "illegal" ranks only apply when using the Power to inflict or resist physical damage (but not mental/psychic damage, as discussed above). And a third approach would be to create special equipment that provides gear-equivalent bonuses for Powers. For example, magic rods, staves, and wands could grant "Weapon Bonuses" to attack Powers that have a Magic Source. These are just suggestions; feel free to come up with whatever approach best suits your game world.

ARMOR

Armor grants you the Armor Power at a rank equal to your Toughness plus the **Armor Bonus** shown on the **Armor** table, depending on the armor worn. If you already have Armor, you can use it in place of Toughness when determining your effective Armor rank while wearing artificial armor. Advanced suits of powered armor may include built-in weaponry and equipment like communications, life support, sensor systems, and servos that enhance your Abilities. Features like these should be considered Powers.

ARMOR

ARMOR	ARMOR BONUS	FEATURES
Ancient, Leather	+0d	—
Ancient, Mail	+1d	Bulky
Ancient, Plate	+2d	Rigid
Modern, Armored Uniform	+1d	—
Modern, Tactical Gear	+2d	Bulky
Modern, Military/Riot Gear	+3d	Rigid
Advanced, Light	+2d	—
Advanced, Medium	+3d	Bulky
Advanced, Heavy	+4d	Rigid

ARMOR FEATURES

The features listed on the Armor table are described below. Additional features may be added to armor by customizing it, as discussed later in this chapter.

BULKY

Characters wearing this armor suffer a –1d penalty on challenge rolls involving acrobatics, speed, stealth, and swimming unless they have a Might of 4d or greater.

RIGID

Characters wearing this armor suffer a –1d penalty on challenge rolls involving acrobatics, speed, stealth, and swimming.

SHIELDS

Using a mundane shield in your off-hand grants you a +1d **Shield Bonus** to both active and passive defense rolls against physical and energy attacks. You can use a shield as an off-hand weapon if you wish (see Weapons below), but you then lose the defensive benefit provided by the shield until your next turn to act. Shields provide no benefit when you are surprised or unable to defend yourself.

WEAPONS

All weapons have a **Weapon Bonus**. When wielding a melee weapon, you add its Weapon Bonus to your Might or Martial Arts rank when making close combat attacks, and you add its Weapon Bonus to your Agility or Martial Arts rank when defending yourself against close combat attacks. When wielding a ranged weapon, you add its Weapon Bonus to your Agility when attacking in ranged combat.

Most weapons inflict lethal damage, but an "(s)" after the Weapon Bonus means the weapon inflicts subdual damage. Ancient and modern weapons inflict physical damage. Most advanced weapons inflict energy damage, but "Stun" and "Vibro" weapons inflict physical damage. Ranged weapons can be used at up to Distant Range unless they have a feature like Line of Sight or Thrown.

WEAPON FEATURES

The features listed on the weapons tables are described below. Additional features may be added to weapons by customizing them, as discussed later in this chapter.

Area/Burst: These features work like the Pros of the same name. For ease of reference, you can assume that all Burst weapons have a 30-foot diameter area of effect, except for Stun Grenades and Entangler Grenades, which have a 15-foot diameter area of effect.

Armor Piercing: This feature works like the Pro of the same name.

Binding: The weapon is used to capture targets rather than hurt them. Although the weapon doesn't inflict damage, it can still be used to perform grabs, holds, and combat stunts.

Evan Mobley (Order: 29850615)

ANCIENT WEAPONS

WEAPON	TYPE	WEAPON BONUS	FEATURES
Axe	Melee	+2d	—
Baton	Melee	+1d (s)	Thrown
Battle Axe	Melee	+3d	Two-Handed
Bolas	Ranged	+1d (s)	Flexible, Thrown
Bow	Ranged	+2d	Two-Handed
Cestus	Melee	+1d	—
Club	Melee	+2d (s)	—
Crossbow	Ranged	+3d	Readied, Two-Handed
Dagger	Melee	+1d	Thrown
Flail	Melee	+2d	Flexible
Great Sword	Melee	+3d	Two-Handed
Hand Axe	Melee	+2d	Thrown
Katar	Melee	+2d	—
Lasso or Net	Ranged	+2d	Binding, Thrown
Mace	Melee	+2d	—
Morningstar	Melee	+3d	Two-Handed
Nunchucks	Melee	+2d (s)	Flexible
Polearm	Melee	+3d	Two-Handed
Shield	Melee	+1d (s)	Shield
Shield, Spiked	Melee	+1d	Shield
Sling	Ranged	+2d (s)	—
Spear	Melee	+2d	Thrown, Versatile
Staff	Melee	+3d (s)	Two-Handed
Sword	Melee	+2d	—
Three Section Staff	Melee	+3d (s)	Flexible, Two-Handed
Throwing Star	Ranged	+0d	Thrown
Whip	Melee	+1d (s)	Flexible

MODERN WEAPONS

WEAPON	TYPE	WEAPON BONUS	FEATURES
Assault Rifle	Ranged	+4d	Area, Two-Handed
Baseball Bat	Melee	+1d (s)	Versatile
Brass Knuckles	Melee	+1d (s)	—
Combat Knife	Melee	+1d	—
Grenade, Explosive	Ranged	+4d	Burst, Thrown
Grenade, Stun	Ranged	+3d	Burst, Dazzle, Thrown
Grenade, Tear Gas	Ranged	+3d	Irritant, Thrown
Grenade Launcher	Ranged	—	Launcher, Two-Handed
Heavy Machinegun	Ranged	+6d	Braced, Burst
Pistol	Ranged	+2d	—
Pistol, Snub	Ranged	+1d	—
Rifle	Ranged	+3d	Two-Handed
Rifle, Sniper	Ranged	+4d	Line of Sight, Two-Handed
Riot Shield	Melee	+0d (s)	Shield
Rocket Launcher	Ranged	+7d	Burst, Readied, Two-Handed
Shotgun	Ranged	+3d	Two-Handed
Shotgun, Automatic	Ranged	+4d	Area, Two-Handed
Slingshot	Ranged	+1d (s)	Two-Handed
Submachine Gun	Ranged	+2d	Area, Versatile
Taser Pistol	Ranged	+2d	Stun
Throwing Knife	Ranged	+1d	Thrown

Evan Mobley (Order: 29850615)

ADVANCED WEAPONS

WEAPON	TYPE	BONUS	FEATURES
Blast Cannon	Ranged	+7d	Burst, Two-Handed
Blast Grenade	Ranged	+5d	Burst, Thrown
Blast Pistol	Ranged	+3d	—
Blast Rifle	Ranged	+4d	Two-Handed
Blast Rifle, Military	Ranged	+5d	Area, Two-Handed
Entangler Grenade	Ranged	+3d	Burst, Ensnare, Thrown
Monomolecular Blade	Melee	+2d	Armor Piercing, Versatile
Monomolecular Knife	Melee	+1d	Armor Piercing
Monomolecular Whip	Melee	+4d	Armor Piercing, Flexible
Plasma Sword	Melee	+4d	Penetrating, Versatile
Stun Baton	Melee	+1d (s)	Shock
Stun Staff	Melee	+3d (s)	Shock, Two-Handed
Vibro Axe	Melee	+4d	Armor Piercing, Two-Handed
Vibro Blade	Melee	+3d	Armor Piercing, Versatile
Vibro Knife	Melee	+2d	Armor Piercing

Evan Mobley (Order: 29850615)

Braced: The weapon is too heavy to use effectively unless braced or mounted on something. If you have at least 6d Might, however, you're perfectly capable of using this weapon in two hands.

Dazzle: The weapon works like a version of the Dazzle Power with a Power rank equal to your attack rank (your Trait plus the item's Weapon Bonus).

Ensnare: The weapon delivers an attack that works like the Ensnare Power with a Power rank equal to your attack rank (your Trait plus the item's Weapon Bonus).

Flexible: The weapon is flexible, like a chain or whip, and can be used to perform grabs, holds, and combat stunts as well as to inflict damage.

Irritant: The weapon works like a version of the Irritant Power with a Power rank of 3d plus your net successes on an Easy (0) attack roll (using your Agility plus the item's Weapon Bonus).

Launcher: The weapon fires grenades. Select the grenades separately. Although they have identical statistics for game purposes, these grenades aren't the same as those tossed by hand.

Line of Sight: This feature works like the Pro of the same name.

Penetrating: This feature works like the Pro of the same name.

Readied: This feature works like the Con of the same name.

Shield: The weapon serves as a shield and provides a +1d Shield Bonus.

Shock: The weapon inflicts damage and also delivers a carrier attack that works like the Stun Power with a Power rank equal to your attack rank (your Trait plus the item's Weapon Bonus).

Stun: The weapon does not inflict damage, but it delivers an attack that works like the Stun Power with a Power rank equal to your attack rank (your Trait plus the item's Weapon Bonus).

Thrown: The weapon can be thrown at targets within Close Range (or farther, depending on how strong you are, as discussed in Chapter 4). When dealing with small ranged weapons like grenades or throwing stars, you carry enough to avoid worrying about running out in the middle of a scene.

Two-Handed: This feature works like the Con of the same name.

Versatile: The weapon can be used in one or two hands. Increase the item's Weapon Bonus by 1d when wielding the weapon in two hands, as this affords you more power and better control.

EQUIPMENT

Heroes are assumed to carry whatever tools and other equipment they need to use their skills, meaning their Talents with a rank of 4d or more. For example, if you have at least 4d Covert, you carry lock picks and whatever other tools that Talent might require (when in costume anyway). While that's normally enough, you will sometimes need other equipment. The following list should get you started.

Binoculars: Grant you Super Senses (Telescopic Vision). Powered binoculars also grant Super Senses (Thermal Vision or Ultra Vision) as well.

Bug Detector: Detects active bugs and transmitters within Close Range.

Caltrops: Floor spikes that can slow or stop pursuers. They are sometimes poisoned.

Camera: An advanced digital camera. Many also work like high-tech binoculars, granting you Super Senses (Telescopic Vision and either Thermal Vision or Ultra Vision).

Cell Phone: Ubiquitous means of communication and wasting stupid amounts of time.

Climbing Claws: Add +2d to challenge rolls made to climb natural surfaces.

Climbing Gear, Ice: Makes climbing sheer ice possible for ordinary human beings.

Climbing Gear, Urban: Makes climbing sheer crystal or glass surfaces possible for ordinary human beings. Advanced versions might use magnets to let you climb sheer metal surfaces.

Computer: Small, wireless, top-of-the-line, and highly encrypted portable computer.

Communicator: High-tech version of a cell phone common in sci-fi games.

Crowbar: Adds +4d to Might rolls when forcing things open or apart.

Explosives: Material and detonators required for controlled demolitions.

Flashlight: A small but powerful flashlight with a variable-width beam.

Gas Mask: Grants you the Immunity (Toxins) Power limited to those that affect the eyes or are inhaled.

Geiger Counter: Detects and displays the level of radiation.

Evan Mobley (Order: 29850615)

Handcuffs: Can be metal or plastic; Inhuman (5) threshold to break but plastic ones are easily cut.

Lantern: Provides light in an area. Ancient ones burn oil and last a few hours. Modern ones use regular batteries and last much longer. Some can recharge rings.

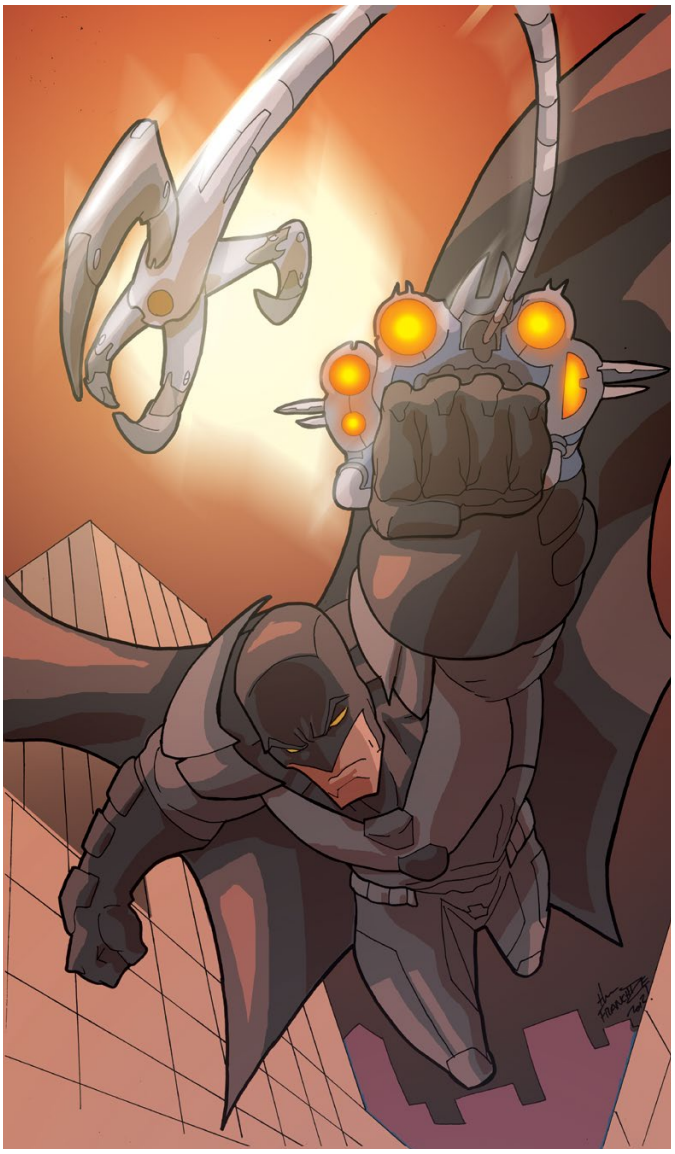

Light Stick: Chemical stick that glows for a few hours when activated.

Lockpick Gun: This device will quickly open most normal mechanical locks. If you aren't a police officer, it will also get you thrown in jail really quickly.

Night Vision Goggles: Grants you Super Senses (Thermal Vision or Ultra Vision).

Parabolic Microphone: Grants you Super Senses (Acute Hearing 9d).

Parachute: Allows for safe falls from extreme heights and provides limited gliding.

Police Scanner: Allows you to listen in on local law enforcement communications. If you aren't a police officer, owning one will get you arrested.

Polyhedral Dice: Nothing to see here, so just move along.

Radio: An advanced, multi-channel, and probably hands-free walkie-talkie. An earbud radio is a tiny version that you place in your ear, making it both hands-free and completely hidden.

Rappelling Gear: Allows for rapid descent from heights with an Easy (0) Agility roll.

Scanner: A handheld device used to analyze matter and energy in sci-fi games.

Scuba Gear: Allows you to operate underwater for up to 1 hour.

Scope: Mounted on a firearm, modern versions often work just like high-tech binoculars.

Silencer: Also called a suppressor, it muffles the sound of a firearm as well as its muzzle flare.

Space Suit: Sci-fi gear that lets you operate in outer space for hours. Most come equipped with magnetic boots that let you walk on the hull of a ship instead of flying off into space. Some also come with pressurized gas jets that let you fly around in vacuum, but that usually takes practice.

Telescope: Primitive means of granting the user a limited version of Super Senses (Telescopic Vision).

Tracer Bug: Small transmitter that emits a periodic signal.

Transmitter: Transmits audible sounds to a predetermined receiver.

Wiretap: A transmitter affixed to a phone line or optic cable to tap calls and other communications.

Zip Tie: Can be used as handcuffs in a pinch; Brutal (4) threshold to break but easily cut.

CUSTOM GEAR

Custom gear falls somewhere between the mundane armor, weapons, and equipment used by ordinary characters and the technological marvels and arcane artifacts represented by Powers with the Item Con. You can customize your mundane gear by adding unique elements, including Pros, Cons, and the features below. You have to spend Hero Points to customize gear. If you have the Two-Fisted power and you fight with paired weapons, you can customize two identical weapons for the price of one (you don't have to pay for each weapon separately). As with everything else, all gear customization is subject to the GM's review and approval.

Evan Mobley (Order: 29850615)

CUSTOM FEATURES

The features below can be applied to different types of gear to make them your own. While some of these features might be readily available on present-day Earth, others suggest advanced technology, magical enhancement, or the kind of craftsmanship that doesn't come cheap (looking at you Bonded, Concealed, Hardened, Masterpiece, Upgraded, Very Accurate, and Very Powerful). The GM is free to make features like these and any others they wish unavailable to Heroes unless they have Perks like Patron, Resources, or Wealth, or to prohibit certain features completely, so check with your GM before selecting any of the features below. Having said that, if the GM approves, you should also feel free to get creative and make up your own features using the examples below as a guide.

ACCURATE/VERY ACCURATE
1 to 2 Hero Points

A personal weapon with this feature is more accurate than usual. This grants you a +1d bonus on your attack rolls when targeting an enemy using an active defense against your attack. If you spend 2 Hero Points on this feature, the weapon is Very Accurate, granting you a +2d bonus instead.

BONDED
1 Hero Point

As a result of something like genetic coding or a mystical evaluation of destiny, lineage, or worthiness, the item will only work for you (or perhaps for you and a select few).

COLLAPSIBLE
1 Hero Point

The item can be collapsed into a small and easily portable form.

CONCEALED
1 Hero Point

The item is concealed in another item or disguised to look like something else.

DEFLECTING
2 Hero Points

This feature is applied to armor that uses hard, angled plates or the equivalent to deflect attacks. Characters wearing this armor can add half its Armor Bonus to their active defense rolls (subject to the game's Gear Limit). Characters armed with melee weapons cannot apply both this bonus and a Weapon Bonus to their active defense rolls, but they can select which of these bonuses to apply. This feature does not work against attacks that have the Armor Piercing or Penetrating Pros.

FITTED
2 Hero Points

This feature is added to Bulky or Rigid armor to eliminate the penalty to challenge rolls involving acrobatics, stealth, and speed. The penalty still applies when swimming in the armor.

HARDENED
2 Hero Points

This feature is applied to armor to make it especially resilient. It counteracts the effects of the Armor Piercing Pro. The Penetrating Pro, however, works normally against this item.

MASTERPIECE
2 Hero Points

An item with this feature is exceptionally well-crafted and constructed of high quality or materials or parts. This lets you reroll one challenge roll per scene when using the item.

POWERFUL/VERY POWERFUL
1 to 2 Hero Points

A personal weapon with this feature is more powerful than usual. This grants you a +1d bonus on your attack rolls when targeting an enemy using a passive defense against your attack. If you spend 2 Hero Points on this feature, the weapon is Very Powerful, granting you a +2d bonus instead.

REINFORCED
2 Hero Points

This feature usually indicates that the armor is constructed of especially damage-resistant materials. It increases the Armor Bonus provided by the item by 1d.

SILENCED
1 Hero Point

This feature is a version of the Subtle Pro that applies only to ranged weapons. It means the weapon makes much less noise and lacks the usual visual signature like muzzle flare. This feature is more effective than ordinary silencers you can obtain as gear (assuming you can find one for sale).

UPGRADED
2 Hero Points

This feature increases the Armor Bonus provided by armor, the Shield Bonus provided by a shield, the Weapon Bonus provided by a weapon, or the core bonus provided by any other item by 1d. This bonus stacks with that provided by other features.

PROS AND CONS

As physical objects, every piece of gear has the Item Con. Apart from that, many other Pros and Cons can be applied to a piece of gear to make it unique. Pros and Cons cost the same when applied to gear as when applied to Powers. Regardless of Cons, no piece of gear can cost less than 0 Hero Points (in other words, no piece of gear will end up granting you extra Hero Points). Pros and Cons commonly applied to gear include Area of Effect, Armor Piercing, Build-Up, Burnout, Carrier Attack, Charges, Delay, Fuse, Independent, Line of Sight, Ongoing, Overkill, Overload, Penetrating, Phase Shift, Readied, Recharge, Selective, Subtle, Toxin, Trap, Two-Handed, Unreliable, and Weak.

Evan Mobley (Order: 29850615)

GADGETS

Heroes sometimes find themselves in need of a unique item in the middle of a story. While it normally takes a great deal of time to design and manufacture complex devices and machines in the real world, Heroes with superhuman intelligence or technical skill can do this in almost no time when the situation demands it. These hastily constructed items are **Gadgets**. To create a Gadget, you need to have at least 6d Technology. You also need access to tools, materials, and facilities. Assuming you have these things, the steps to creating a Gadget are as follows.

Step 1: Assign Complexity. Assign the Gadget a **Complexity** of anywhere from 3 to your Technology rank. A gadget's Complexity determines how powerful it will be and how hard it will be to create.

Step 2: The Challenge Roll. Make a Technology roll using the gadget's Complexity as the threshold. If successful, you build the Gadget. See step 3. If you succeed by only 1 or 2 points, the gadget will have some unique flaw, quirk, or side-effect, the nature of which is entirely up to the GM.

Step 3: Build the Gadget. If you make the roll, you gain a number of Hero Points equal to double the item's Complexity to buy Abilities, Talents, and Powers that represent your new Gadget. By default, all Gadgets have the Item Con. You get no extra points for that. However, you can give your Gadget any other Pros and Cons you wish. Optionally, you can also use these Hero Points to modify mundane gear as discussed above — in effect, the Gadget represents your special modifications.

Whether or not you succeed, creating a Gadget takes one scene that lasts about 10 minutes times the item's Complexity. Gadgets are inherently unstable and often temperamental. Roll one die each time you use one. When you roll less than the number of times you've used it, the Gadget stops working. The maximum number of Gadgets you can create per issue equals half your Intellect.

These rules cover the spur-of-the-moment, emergency kit-bashing that tech-savvy Heroes are notorious for. Characters who always have at least a few gadgets at the ready will normally have a Power like Omni-Power (Gadgets). However, if your GM allows it, you may be able to use these rules to create Gadgets before an adventure begins. If so, these Gadgets will still count against the total number of Gadgets you can create per issue.

You can also use Science to create Gadgets that represent compounds and materials or Medicine to create Gadgets that represent drugs and medicines. If your GM allows it, you might even be able to create magical or techno-magical Gadgets, depending on the game world. In that case, the GM will have to determine which Talent applies to creating such things. Regardless of what you create, the maximum number of Gadgets you can create per issue always equals half your Intellect.

VEHICLES

Not everyone can fly, swing from building to building, or teleport from place to place. Some Heroes have to rely on ordinary (and not-so-ordinary) vehicles to get around. Although mainly used as a means of transport, many vehicles also serve as powerful tools in a Hero's crime fighting arsenal. This section discusses both mundane vehicles and the unique vehicles often employed by superheroes, their allies, and their enemies.

VEHICLE CHARACTERISTICS

Most vehicles are defined by four characteristics: Body, Speed, Control, and Weapons. Each covers a specific aspect of the vehicle's performance, as described below.

BODY

This characteristic measures a vehicle's durability, taking defenses like countermeasures and energy screens into account. Except as noted under Capital Ships later in this section, a vehicle's Body counts as both Armor and Health. A vehicle's Body also protects its passengers. Characters inside a vehicle can use its Body as their passive defense against attacks coming from outside the vehicle unless the vehicle has an open cockpit. Passengers in a vehicle with an open cockpit are exposed and unprotected.

SPEED

This characteristic determines how fast a vehicle can move and how long it takes to travel from one place to another. It's the equivalent of a Travel Power for these purposes. If a vehicle has more than one mode of movement, it should have a different Speed rank for each.

CONTROL

This characteristic is a modifier that reflects how well the vehicle performs. It covers everything from handling and maneuverability to targeting systems and fire controls. Whenever the rules call for a **Control roll**, you make a Vehicles roll modified by your vehicle's Control. Capital ships, discussed later in this section, always have a Control of –3d for every 30 points of Health.

Like all mundane gear, vehicles are subject to the game's Gear Limit. However, if vehicles are going to play an important role in a particular series, the GM may wish to raise the vehicular Gear Limit to 9d, 12d, or more, allowing characters to take advantage of their full Vehicles rank.

WEAPONS

This characteristic represents the vehicle's weapon systems. It's an abstraction that covers everything from a single nose gun or turret to a vast array of weapon batteries and offensive systems.

Evan Mobley (Order: 29850615)

VEHICLE COMBAT

Piloting a vehicle works like everything else in P&P. If you know what you're doing, you can automatically operate a vehicle under ordinary conditions without trouble. If you find yourself doing something out of the ordinary, the GM may call for a challenge roll, which in this case is usually going to mean a Control roll. When operating a vehicle in combat, the following rules also apply.

EDGE

When operating a vehicle, your Edge equals your Vehicles as modified by the vehicle's Control. Use your full Vehicles rank when determining your Edge, regardless of the game's Gear Limit. Capital ships always act after ordinary vehicles, but Edge determines action order among them.

CHASES

Vehicular chases work just like those between characters, as discussed in Chapter 4. When moving through clear and unobstructed terrain, you can use a vehicle's Speed as its Travel Power. When moving through winding terrain where maneuverability matters, you make Control rolls instead.

ATTACKS AND DEFENSES

When firing a vehicle weapon at an enemy, make a Control roll against your target's active defense or a Weapons roll against their passive defense. Use whichever option favors the defender. If your vehicle has an attack Power, substitute its rank for your Weapons rank when using that Power. If you're trying to ram an enemy instead of shooting them, substitute your vehicle's Body rank for its Weapons rank. Vehicles use Control rolls for active defense and Body rolls for passive defense.

To be clear, vehicle attacks make a distinction between accuracy and damage. The Control roll represents the attack's accuracy and the Weapons roll represents how much damage it inflicts. You use whichever roll favors the defender because both factors are at work in the game world. Characters don't have to worry about this, even when they attack vehicles. When characters attack vehicles, it works like an ordinary attack, with the target—in this case the vehicle—using the greater of their active defense (a Control roll) or their passive defense (a Body roll) to resist the attack.

Your starfighter has a 14d Weapons characteristic that represents its plasma cannons and a 12d Ensnare Power that represents a tractor beam. Whenever you fire your plasma cannons at an enemy ship, you either make a Control roll against your target's Control roll or a 14d Weapons roll against your target's Body. Whenever you try capturing an enemy ship with your tractor beam, you either make a Control roll against your target's Control roll or a 12d Ensnare roll against your target's Body. Either way, you use whichever option favors the defender.

DAMAGE AND REPAIR

Like characters, vehicles suffer 1 point of damage per net success scored against them. Ram attacks inflict 1 point of damage per net success scored on the attack roll, but if the attacker's Body is less than or equal to the target's Body, the attacker suffers the same amount of damage. For these purposes, characters have an effective Body equal to their Armor or half their Toughness.

Most vehicles are disabled or destroyed after suffering a number of points of damage equal to their Body. As discussed below, capital ships are the exception and can sustain more damage, but even capital ships are disabled or destroyed if they suffer damage that equals or exceeds their Body in one attack.

GMs may wish to let attackers target specific vehicle systems by accepting a –2d penalty to their attack rolls. If the attack succeeds, instead of inflicting damage, it disables one of the target's systems. That can mean disabling one of the vehicle's features (see below), its ability to move, or its weapons. Rolling 1 or 2 net successes disables the system until the end of the attacker's next turn to act. Rolling 3 or more net successes disables the system for the rest of the scene.

Vehicles don't heal themselves unless they have a very high creepy factor. Instead, they have to be repaired. As noted under the description of Technology in Chapter 2, you can attempt to perform field repairs on a damaged vehicle if you have the necessary tool and materials on hand.

CAPITAL SHIPS

Massive vehicles like modern-day warships and their sci-fi equivalents are **capital ships**. Capital ships work differently than ordinary vehicles. A capital ship's Edge equals its captain's Intellect, assuming the captain knows what they're doing (this is up to the GM), or half the captain's Intellect if they don't. If capital ships are going to play an important role in your game, you may want to require that characters use the Expertise Power to indicate experience commanding capital ships.

Standard capital ship weapon attacks are always resolved using the ship's Weapons, but they have the Overkill Con when used against anything other than other capital ships or fixed locations. That means ordinary vehicles and characters double their successes when using active defenses against capital ship attacks. As a result, capital ships often incorporate pinpoint defense weapons designed for use against smaller targets. These weapons have a rank 6d lower than the ship's Weapons, but they don't have the Overkill Con. Capital ships are usually armed with enough pinpoint weapons to attack every ship within range once per page. Capital ships never perform active defenses.

Ram attacks also work differently for capital ships. Capital ships can only ram other capital ships and slow-moving or stationary objects. These attacks are resolved with opposed Edge rolls between the captains. If the vessels have different Control values, the smaller one gets a bonus to this roll equal to the difference between them. For example, a capital ship with 30 Health and –3d Control gets a +6d bonus to ram or evade a capital ship

Evan Mobley (Order: 29850615)

with 90 Health and –9d Control. If a ram attack succeeds, both vessels suffer damage equal to the smaller ship's full Health (even if that ship is damaged). If the attacker rolls 3 or more net successes, they can choose to suffer half damage. If the attacker rolls 5 or more net successes, they can instead choose to inflict double damage on the target vessel.

Unlike ordinary vehicles, capital ships don't use their Body as their Health. Instead, these oversized vehicles have Health scores in multiples of 30 (30, 60, 90, etc.). There's no magic formula here: bigger capital ships should just have higher Health scores. Even so, a capital ship struck by an attack that inflicts at least its Body in damage in one shot is immediately disabled or destroyed.

FOE AND MINION PILOTS

Foes and Minions bring their limitations with them when they get behind the wheel. When Foes pilot vehicles, those vehicles can sustain only half as much damage as usual. For example, an ordinary sedan with 7d Body is disabled or destroyed after suffering only 4 points of damage (half of 7) when driven by a Foe. When Minions pilot vehicles, they still act like Minions. They use Threat in place of the Vehicles Talent. They attack in groups and enjoy their usual attack roll bonuses (these bonuses apply to both the Control roll and the Weapons roll). And they fall at the usual pace of 1 Minion — or in this case 1 vehicle — per net success rolled against them. These rules don't apply to capital ships.

MUNDANE VEHICLES

The tables on the next page include a variety of mundane (and maybe some not so mundane) vehicles you can use in your game. As with everything else, the vehicles below are only generic examples. Feel free to modify these entries however you wish to suit your game.

UNIQUE VEHICLES

The Unique Vehicle Perk means you possess a vehicle with unique properties. Every Hero Point you put into this Perk grants you 25 **Vehicle Points**. You spend Vehicle Points to create unique vehicles from scratch or to improve unique vehicles you already possess. Multiple Heroes can pool their Vehicle Points together to create a single, seriously sweet ride if they wish.

CHARACTERISTICS

You spend Vehicle Points to buy or improve a unique vehicle's Body, Speed, Control, and Weapons. Body, Speed, and Weapons cost 1 Vehicle Point per rank. Control costs 2 Vehicle Points per rank and can't exceed half the vehicle's Speed. Giving your unique vehicle a negative Control value lowers its cost by 2 Vehicle Points per negative rank, down to a minimum of –3d Control. When creating a unique vehicle from scratch, Body, Speed, and Control have an initial rank of 0d, while Weapons has an initial rank of "n/a" (your unique vehicle isn't armed unless you spend points on Weapons).

STOCK VEHICLES

If you don't want to go through the hassle of creating a unique vehicle from scratch, you can purchase one of the stock vehicles listed below and modify it. GMs who want to keep vehicles somewhat realistic may want to limit how much you can upgrade stock vehicles. If so, it would be reasonable to rule that you can increase a stock vehicle's Body by up to 6 ranks, Speed by up to 4 ranks, and Control by up to 2 ranks. Again, this is completely optional and best reserved for more realistic games.

HELICOPTER

25 Vehicle Points

Body 7d, Speed 7d, Control +3d, Weapons n/a

Features: Com System, Flight, Passengers 4

JET FIGHTER

54 Vehicle Points

Body 8d, Speed 10d, Control +5d, Weapons 12d

Features: Com System, Flight, Sensors

MOTORCYCLE

18 Vehicle Points

Body 5d, Speed 7d, Control +3d, Weapons n/a

Features: Open Cockpit, Running, Small

SPEEDBOAT

10 Vehicle Points

Body 6d, Speed 6d, Control +1d, Weapons n/a

Features: Open Cockpit, Passengers 8, Swimming

SPORTS CAR

17 Vehicle Points

Body 6d, Speed 7d, Control +2d, Weapons n/a

Features: Running

SUBMERSIBLE

14 Vehicle Points

Body 9d, Speed 5d, Control –2d, Weapons n/a

Features: Com System, Passengers 8, Rader (Sonar), Submersible, Swimming

VEHICLE FEATURES

Vehicles can have any number of features. For unique vehicles, these features are purchased with Vehicle Points. Some undesirable features have a negative cost. Selecting these features lowers the cost of a unique vehicle by the amount indicated. Common vehicle features are described below, but feel free to get creative and make up your own using the ones below as a guide.

CARGO HOLD

2 Vehicle Points

The vehicle can store a great deal of cargo and includes lifts, ramps, and similar elements to facilitate loading and unloading. The specifics are up to you and your GM. The storage space provided by this feature is separate from that provided by Hidden Compartments (see below).

Evan Mobley (Order: 29850615)

AIR / SPACE VEHICLES

Yacht	9d	5d	–2d	—

***Open Cockpit:** The vehicle's Body doesn't protect its passengers against direct attacks.
****Capital Ship:** The vehicle's effective Health equals the number in parenthesis instead of its Body.

COM SYSTEM
2 Vehicle Points

The vehicle incorporates some kind of long-range communication system, whatever is considered top-of-the-line in your setting. Being equipment, this feature isn't as versatile as the Communications Power and requires a communications infrastructure for long-distance transmissions.

DISGUISE
2 Vehicle Points

Whether by means of an image projector, a magic spell, the ability to actually transform, or something else, the vehicle can make itself look like an entirely different vehicle (albeit of the same type). If the vehicle has the Transforming feature (see below), this feature can apply to one of its configurations, or it can mean you can't tell that the different forms are configurations of the same vehicle.

FLIGHT
2 Vehicle Points

The vehicle travels through the air, in space, or both. Vehicles with this feature need room to maneuver and can't travel indoors or move through extremely cramped quarters, at least not when moving through the air. If the vehicle also has the Running or Swimming features, you must buy separate Speed and Control values for each.

GIANT
– 6 Vehicle Points

The vehicle is much larger than an ordinary ground vehicle. It takes up several lanes of traffic, cannot fit into most tunnels, and will not be able to move through ordinary city streets without causing significant collateral damage. Only ground vehicles can have this feature (although any vehicle can be large).

GUNNERY STATION
2 Vehicle Points per gunnery station

Vehicle weapons can be fired once per page by a pilot or gunner. Extra attacks are possible, but they suffer the usual multiple action penalty regardless of who makes them (the penalty applies to the vehicle rather than to individual characters). This feature means the vehicle has one or more gunnery stations (1 per 2 Vehicle Points). Every gunnery station allows a different character to use the vehicle's weapons to perform one extra attack per page without suffering multiple action penalties.

HIDDEN COMPARTMENTS
1 or 2 Vehicle Points

The vehicle has hidden storage compartments. Small compartments only large enough to hide weapons and personal items cost 1 Vehicle Point, while large ones roomy enough to hide the vehicle's crew and passengers, or a good deal of smuggled cargo cost 2 Vehicle Points.

INTEGRATED AI
1 Vehicle Point per rank

The vehicle can operate independently with a Vehicles rank equal to the number of Vehicle Points put into this feature. Although this usually means the vehicle is controlled by computer, it could mean something completely different. For example, the vehicle might be magically animated, or it might be alive and sentient, singing songs into the minds of those who visit its space dock.

Evan Mobley (Order: 29850615)

MECHA
1 Vehicle Point per Might rank

The vehicle is shaped like a person. It has at least two arms that end in hands (or the rough equivalent). It also has at least two legs, allowing it to do things ordinary vehicles can't, like move laterally, peek over objects, hunker down behind cover, and so on. The limbs have whatever Might rank you give them, but you make Control rolls when using the hands for delicate work or the legs for delicate maneuvers. When using the limbs to attack, substitute the vehicle's Might rank for its Weapons rank. Only ground vehicles can have this feature. A vehicle's Might must equal at least half its Body.

This feature applies to vehicles that, while humanoid in shape, still operate like vehicles. Giant robot vehicles that are as agile as human beings should be treated like giant characters.

OPEN COCKPIT
–2 Vehicle Points

The vehicle has an open cockpit, so its crew and passengers can be targeted directly and can't use the vehicle's Body when making passive defense rolls against attacks.

PASSENGERS
1 Vehicle Point per 4 extra passengers

The default vehicle carries only two people, one driver or pilot and one passenger. This feature means the vehicle can carry more people (4 per Vehicle Point).

PERSONAL
2 Vehicle Points

For whatever reason (access codes, genetic tagging, inherent worthiness, etc.), only a specific person or a specific group of people can operate the vehicle.

REMOTE CONTROL
2 Vehicle Points

You can operate the vehicle remotely. Operating a vehicle by remote requires just as much attention and focus as it would if you were driving or piloting it.

RUNNING
0 Vehicle Points

The vehicle travels on land. If the vehicle also has the Flight or Swimming features, you must buy separate Speed and Control values for each.

SECURITY SYSTEMS
1 Vehicle Point

The vehicle has excellent security systems far above and beyond the usual, making it extremely hard to steal. Any challenge rolls made to attempt to steal it have a Superhuman (6) threshold.

Evan Mobley (Order: 29850615)

SENSORS
10 Vehicle Points

The vehicle has a full sensor suite that works like a combination of Radar and the following Super Senses: Circular Vision, Telescopic Vision, Thermal Vision, and Ultra Vision. Sensor data can be recorded and, if the vehicle has the Com System feature, transmitted.

SMALL
2 Vehicle Points

The vehicle is small, anywhere from as small as a surfboard to as large as a motorcycle. It can get into and maneuver around in places inaccessible to ordinary vehicles. Notwithstanding this feature, a small vehicle must still be a vehicle. If a "vehicle" is small enough to be carried, worn, or taken anywhere a character can go, then it should probably be treated like a Power with the Item Con.

SPACEFLIGHT
4 Vehicle Points

The vehicle can operate in the vacuum of space and includes life support systems necessary to protect its crew and passengers in this environment. It can also cross vast interstellar distances at speeds far beyond that of light. The Flight feature is still required to fly in an atmosphere.

SPACESHIP
2 Vehicle Points

The vehicle can operate in the vacuum of space and includes life support systems necessary to protect its crew and passengers in this environment. The Flight feature is still required to fly in an atmosphere.

SUBMERSIBLE
2 Vehicle Points

The vehicle can operate underwater and includes life support systems necessary to protect its crew and passengers in this environment. Only vehicles with Swimming can have this feature.

SWIMMING
– 4 Vehicle Points

The vehicle travels on water. If the vehicle also has the Flight or Running features, you must buy separate Speed and Control values for each.

TRANSFORMING
– 2 Vehicle Points

This feature applies to vehicles with two or more of the following features: Flight, Running, Submersible, and Swimming. It means the vehicle must spend one page doing nothing but transforming into a different configuration each time it switches from using one of these features to another. In a pinch, you can spend 1 Resolve to do this as an action instead.

UNIQUE SYSTEMS
1 Vehicle Point per Hero Point

You can spend Vehicle Points in place of Hero Points to buy Abilities, Talents, and Powers that represent unique vehicle systems. For example, you can spend 3 Vehicle Points to give your vehicle Radar (which costs 3 Hero Points). Unique vehicle Powers begin at 0d, even if they have a baseline rank. The one exception is that a vehicle with the Mecha feature can use its Might as the baseline rank for Strike. Common vehicle Powers include Aura, Blending, Darkness, Dazzle, Deflection, Detection, Dimensional Travel, Ensnare, Force Field, Invisibility, Light, Machine Control, Radar, Shrinking, Slick, Strike, Stun, Teleportation, Time Travel, Total Recall, Tracer, Tunneling, and Wall-Crawling.

HEADQUARTERS

Headquarters are as varied as the Heroes and Villains that use them: arctic fortresses, cave complexes, innocuous brownstones, island compounds, orbiting satellites, sprawling mansions, undersea bases, and on and on. Although some groups prefer to leave the creation of a team headquarters to their GM, others like to have a more direct hand in the design of their home base. For those groups, these rules provide guidelines for creating your own unique base of operation.

BASE FEATURES

The Headquarters Perk grants you a basic headquarters, a space no larger than an average mansion or warehouse with whatever basic rooms, equipment, and facilities you would like. At this stage of the process, your headquarters is a relatively mundane affair. However, every Hero Point you put into the Headquarters Perk also grants you 3 **Base Points** you can spend to improve your headquarters by adding the unique features described below. As always, feel free to add any you think we missed. Multiple Heroes can pool their Base Points together to create an even better headquarters.

For the most part, features are described in narrative rather than mechanical terms. However, GMs may grant Heroes a +1d bonus to challenge rolls whenever they can take advantage of an advanced feature in their headquarters. For example, if your base has the Advanced Science Labs feature, the GM may grant you a +1d bonus to Investigation rolls if you can bring any clues you find back to your headquarters for further analysis.

ALTERNATE HEADQUARTERS
1 Base Point

Every Base Point you put into this feature grants you an extra headquarters, in case your primary base of operations gets compromised, destroyed, infested with termites, or otherwise becomes undesirable. Your alternate headquarters can be identical to the primary one, or completely different, but it can't cost more Base Points than your primary headquarters.

Evan Mobley (Order: 29850615)

COMMUNICATIONS
1 to 2 Base Points

You presumably have one or more dedicated computers, phone lines, radios, and whatever other mundane telecommunications equipment you want in your headquarters. This feature, however, means you have something more. One Base Point provides you with standard communications roughly equivalent the best modern-day telecommunications systems and includes, at the very least, military grade encryption. Two Base Points provides you with a communications system that incorporates advanced technology or magic. This system is all-but impossible to hack into and allows you to interface with most global, interstellar, and possibly interdimensional communications systems.

DATA STORE
1 to 2 Base Points

Anyone can access an incredible amount of information from anywhere in the world using only their smartphone. This feature, however, means your headquarters provides you with a wealth of accurate, relevant, and readily accessible data on countless topics. This could come in the form of a database, a library, advanced web technology, a magic mirror, or something else. One Base Point gives you a standard data store filled with information about our world, while two Base Points gives you an advanced data store that provides information on a galactic or interdimensional scale.

DEFENSES
1 to 2 Base Points

Your base includes personnel, systems, or both that actively defend it against hostile intruders. One Base Point provides you with standard defenses in the form of human or animal guards and passive systems like gas dispensers and tasers that react when intruders attempt to perform certain actions or access certain parts of the headquarters. Two Base Points provides you with next-level defenses that often incorporate advanced technology or magic. Whether they're elite troops, robot sentries, bound spirits, magical wards, or something else, these defenses will actively hunt down hostile intruders and attempt to capture or otherwise pacify them. Whatever the case, your defenses always use non-lethal force (although anything's possible when the GM spends a point of Adversity on a misfortune).

DISGUISED
1 Base Point

Your headquarters is disguised to look like something else. For example, it might look like a regular barbershop, brownstone, mansion, office building, or industrial laundry facility on the outside. Note that this is different from a base that's hard to find — for that, see the Hidden feature.

EMERGENCY SYSTEMS
1 Base Point

Your headquarters has back-up power and telecommunications systems. As a result, it will be unaffected by downed phone lines, power outages, and other events that would normally interrupt these systems.

HIDDEN
1 Base Point

Your headquarters is hard to find, and often accessible only by a few secret routes. The best example of this kind of base would be one hidden in an underground cave complex. Note that this is different from a base that's hard to get to; for that, see the Remote feature.

HOLDING CELLS
1 to 2 Base Points

Although you can always tie someone up and lock them in a room or chain them to a column, your headquarters will not have dedicated holding cells unless you spend Base Points on this feature. One Base Point provides you with standard holding cells tough enough to hold mundane prisoners. Two Base Points provides you with holding cells that incorporate advanced technology or magic, allowing you to hold most super-powered prisoners, often using power nullifiers. Having said that, every once in a while, expect your GM to spend Adversity on a misfortune that allows one or more of the prisoners in your holding cells to break free and cause you no end of grief.

LIVING AREAS
1 Base Point

Your headquarters can house a number of individuals — exactly how many depends on the size of the place — and includes everything you would expect to find in a comfortable residence: bathrooms, dining areas, kitchens, lounges, recreation areas, private sleeping quarters, and so on.

MAINTENANCE BAYS
1 to 2 Base Points

Any headquarters is going to include a dock, garage, hangar, or helipad for whatever vehicles you may possess. This feature means your base also includes maintenance bays that allow you to perform repairs and even modify your vehicles. One Base Point provides you with standard maintenance bays as good as those found anywhere in the world. Two Base Points provides you with maintenance bays that incorporate advanced technology or magic and can be used to repair or modify vehicles that employ advanced, alien, or magical technology.

MEDICAL FACILITIES
1 to 2 Base Points

Any headquarters can have a room with cots and basic medical equipment. If you spend Base Points on this feature, however, your base includes true medical facilities. These facilities are able to handle patients who need serious medical attention

Evan Mobley (Order: 29850615)

and may be used to create drugs and medicines, as per the Gadgets rules. One Base Point provides you with standard medical facilities roughly equivalent to those found in the world's premier research hospitals. Two Base Points provides you with advanced medical facilities that can treat beings with alien or bizarre physiologies and even supernatural creatures.

MOBILE
0 Base Points

Your headquarters can travel from place to place. Although this feature is free, mobile bases are also unique vehicles, so you'll have to spend Hero Points on the Unique Vehicles Perk to purchase the base's vehicular characteristics and unique vehicle features. Mobile headquarters are always capital ships: standard bases have 30 Health, bases with the Large Size feature have 60 Health, and those with the Sprawling Size feature have 120 Health. Headquarters with the Enormous Size feature are completely off the scale and can't be attacked or destroyed like normal capital ships.

PERSONNEL
1 Base Point

Your headquarters has a staff of some kind that keeps the place up and running while you're away doing your thing. Your staff can include mundane human employees or volunteers, robotic servants, captive spirits, a built-in AI that operates the whole facility, or whatever else you want.

REINFORCED
1 to 2 Base Points

This feature means your headquarters is significantly tougher than a normal building. One Base Point provides you with standard reinforcement roughly equivalent to a modern-day bomb shelter or military bunker. While powerful supers and heavy-duty military ordnance can penetrate your headquarters, little else can, at least not without a great deal of time and effort. Two Base Points provides you with reinforcement that incorporates advanced technology or magic, making it all-but impenetrable to anything except the most powerful of supers and cosmic-scale events.

Evan Mobley (Order: 29850615)

REMOTE
1 Base Point

Your headquarters is in a remote or hard-to-reach location such as in the Arctic, on the ocean floor, in orbit, on the Moon, or in another dimension. This feature doesn't automatically provide you with a way to travel to and from your base, but it does assume your headquarters incorporates whatever life-support systems may be required in that location.

SCIENCE LABS
1 to 2 Base Points

This feature means your headquarters includes one or more dedicated science labs where you can study things you find in the field. They are also where you can create substances and materials, as per the Gadgets rules. One Base Point provides you with standard science labs equivalent to those found in the world's leading-edge companies and institutions. Two Base Points provides you with science labs that incorporate advanced technology or magic and allow you to analyze even high-tech or magical materials and energies.

SECURITY SYSTEMS
1 to 2 Base Points

Your headquarters is assumed to have mundane security systems such as locks, alarms, and video cameras in place. This feature means your security systems go even further. One Base Point provides you with standard security systems about as good as you can find anywhere in the world, and all-but-impossible for anyone lacking superpowers to penetrate. Two Base Points provides you with security systems that incorporate advanced technology or magic, making them effective against almost every form of intrusion, even by supers. That said, no security system is foolproof, especially not when the GM is willing to spend Adversity on the occasional misfortune.

SIZE
1 to 3 Base Points

Your headquarters is much larger than normal. One Base Point provides you with a large base, about the size of an industrial complex, medieval castle, or office building. Two Base Points provides you with a sprawling base, about the size of a city block, an island complex, a moon base, an orbiting satellite, or a sizable estate. Three Base Points provides you with a truly awe-inspiring base. Almost anything goes at this level, including tiny eastern European nations and space stations the size of a small moon.

TESSERACT
2 Base Points

Whether due to advanced technology that can fold spacetime, magic that alters the fabric of reality, or something else, your headquarters is much larger on the inside than it appears on the outside. With this feature, even something a small as a phone booth can hold a base as large as a giant space station.

TRAINING FACILITIES
2 Base Points

Any headquarters can have an empty space where you spar, lift weights, and shirtlessly salmon ladder your way to fame. This feature, however, means your base includes a sophisticated training facility that lets you and your teammates run simulations and practice drills. Often situated on large areas of open land or in massive rooms, training facilities are usually equipped with advanced holographic "hard light" technology or something equally nonsensical that allows them to simulate any number of real world environments and situations. Many are even able to simulate combat with known Villains. If you and your teammates have a headquarters with this feature, you each gain 1 point of **Teamwork** at the start of every issue. Teamwork works like Resolve that can only be used to assist your allies in combat or during action scenes. Also, know with absolute certainty that eventually your GM will spend Adversity to have your training facilities go completely haywire and try to kill you.

TRANSPORT
2 Base Points

Especially useful for headquarters with the Remote feature, this means your headquarters includes advanced or magical means of transportation to and from the base. For example, your base may incorporate something like teleport pads, an interdimensional gateway, or a magic portal.

WORKSHOPS
1 to 2 Base Points

Your headquarters includes facilities for designing and manufacturing things, from ordinary devices and machines to unique Gadgets. One Base Point provides you with a standard workshop, a top of the line facility that allows you create innovative devices and machines. Two Base Points provides you with a workshop that incorporates advanced technology or magic and allows you to create high-tech, magical, and otherwise fantastical objects.

Evan Mobley (Order: 29850615)
